Most of the chords notated as G are actually played xxDGBx, i.e. just the three open strings of the G chord. In other words, fake it.

In case you were wondering, Charles Babbage was born on December 26, 1792. He invented the stored-program digital computer, which he called the Analytical Engine. The Analytical Engine was also the first *unfinished* computer project. Contrary to popular belief, the mechanical precision of the time was quite capable of producing it, but Babbage kept changing the design and eventually ran out of funding. It's an old story.
